Goodreads AI Feature

Timeline: 10 Weeks - 10 April (1 week)

UX Case Study

Role: Lead Designer

Product Overview

We propose a feature that leverages AI to recommend books and capitalize on the user experience with personalized book recommendations, refining suggestions based on individual preferences, and fostering efficient discovery and engagement opportunities.

This innovation not only elevates user engagement but also transforms Goodreads into a dynamic, intelligent platform, ensuring that every user finds books that resonate with their interests and their unique tastes.

Problem Statement

Understanding the pain points and the user needs within the reading community, the UX research aims to identify opportunities for enhancing the platform's functionality and user satisfaction. By addressing these challenges, the goal is to create a more engaging, efficient, and personalized experience for users, ultimately fostering a deeper connection with literature and the community.

Main Objective

We want to learn what current readers and library goers appreciate and dislike about their experiences so that we may implement changes to improve the overall experience for readers and library goers.

Design Process

Implement a comparable the universal UX Design Process which involves researching user needs, defining personas, and creating wireframes. This process ensures a user-centered approach, leading to intuitive and effective solutions. Conducting usability testing and iterative improvements are fundamentally successful. Launching the refined app with user feedback maximizes success in the market.

Design Timeline

Target Audience

- Goodreads current and future users.
- Users that are recommendations on Goodreads platform.
- People of ages 16-50.

User Research

Development of AI features for Goodreads emerges at a strategic response to the ever-changing needs of book enthusiasts. Fueled by a need to enhance user experience, this initiative is founded in the recognition that traditional approaches may not fully cater to the diverse and dynamic preferences of the modern reader.

Competitive Analysis

Competitive analysis involves evaluating how similar products or features perform in the market. For the Goodreads AI feature, this means studying other platforms with AI-driven book recommendations to identify best practices, potential pitfalls, and unique features.

Unique Features

After conducting competitive analysis these are the unique features that AI brings to the Goodreads platform.

- Personalized recommendations based on user's reading history and preferences.
- Natural language processing algorithms that better understand user queries.
- Overall improved user experience. AI recommendations will streamline integration with other features on the platform.
- Goodreads is already a powerful book tracking and social platform. AI gives opportunities for the platform to expand

User Interview Takeaways

I interviewed 3 individuals 2 different age groups to understand how AI could transform the Goodreads platform. Here are the key takeaways from the interviews that will help us determine what features we can implement to enhance the experience.

- 4 out of the 5 interviewees relied on outside sources such as friends and Netflix for book recommendations.
- 3 out of the 5 interviewees were willing to share their reading habits with AI in exchange for more personalized preferences.
- People would be able to find trusted books easier and not waste time and money reading books they don't enjoy.

Contextual Inquiries

I collaborated with participants in their preferred environments to inquire about Goodreads and observe how they interacted with the platform and the tasks at hand. Below are some of the insights I gained from these contextual inquiries.

User Engagement Analysis

67%

Of users said that the "recommendations" onboarding was extensive and could use an update.

50%

Of users stated that they use Goodreads on a daily basis.

96%

Of users said they would use the application if it had an integrated AI tool for recommendations.

25%

Of users were using Goodreads for their first time.

Pain Points

1. **Book Exploration**
   Users struggle to find new books on Goodreads. Recommendations don't don't always like the preferences.

2. **Reading Preferences**
   The user finds it hard to track and share reading habits. Many readers want to connect with friends who have similar tastes, but the platform lacks effective tools for this.

3. **Time & Money**
   Many readers feel frustrated when they don't want to waste their time and money on books they don't enjoy.

User Persona

Goal: Goodreads AI aims to create a significantly more engaging and effective platform for avid readers like Dominic, who value discovery, connection, and efficient use of their reading time.

New Feature Location

After conducting productive IDI research. We decided on the most effective position for the new feature would be in the active menu bar navigation. The logo right next to one of the most prominent areas on a webpage. Users tend to naturally focus their attention there when looking for navigation options or important features.

We wanted to follow the standard layout where the logo right corner is reserved for navigation options such as menu, account options, or search bars. By placing the new feature in this familiar location, users can easily find and interact without having to search extensively.

User Testing

Process

1. **Define Objectives**
   a. 50% Task success rate (Navigation)
   b. Time on task goal - Three (3) tasks
   c. Error rate under 20%
2. **User Persona Identification**
3. **Create Test Scenarios**
   a. Create a prototype
   b. Navigate results
4. **Recruit Participants** (5 of 5 total)
5. **Prepare Test Materials** (Wireframes, Prototypes)
6. **Conduct the Test**
7. **Gather Feedback**

Findings

1. **Task Engagement**: Overall the engagement was very positive. Users had a perfect task completion rate of 100%. Testimony and first click analysis proved that users were able to navigate the new feature with ease.
2. **Usability**: On the task list participants answer post-test questions in regards to usability. The responses were positive stating that the features was easy to locate, easy to use, straightforward and useful. Users of older age expressed that they would like to see more AI features in the future to help navigate the platform.
3. **Integration**: All 5 AI elements, such as navigation menu, buttons, and forms, worked as intended. This also includes new interactions, such as clicking buttons, filling out forms, and navigating between pages.
4. **Key takeaways**: Overall, Positive test results validated the effectiveness of the design decisions made by the UX team. It indicates that the chosen UI elements, layout, navigation flow, and interactions are well-suited to the needs and preferences of the users.

Roadmap

Looking ahead, we're excited to share our future plans for incorporating the AI feature into the Goodreads platform. This means you'll be able to access it directly from the list within the Goodreads website. The ability to start with an AI that's trained to understand your reading preferences and suggest books you might enjoy, all without leaving the Goodreads platform. It'll learn from your likes, dislikes, and even the books you've abandoned, ensuring that its recommendations get smarter over time. We're also considering adding features that let you chat with the AI about your favorite books, ask for suggestions, or even get help with the familiar Goodreads environment. What's fundamental to creating Goodreads has been developing the book lovers, and this is the feature it was the beginning of what's to come!
